

156-816 CheckPoint

CheckPoint Check Point Certified Managed Security Expert Plus VSX NGX

Practice Exam: 156-816 Exams

Exam Number/Code: 156-816

Exam Name: Check Point Certified Managed Security Expert Plus VSX NGX

Questions and Answers: 140 Q&As

([CheckPoint](#))

Exam : [156-816](#)

"Check Point Certified Managed Security Expert Plus VSX NGX", also known as 156-816 exam, is a CheckPoint certification. With the complete collection of questions and answers, TestInside has assembled to take you through 140 Q&As to your 156-816 Exam preparation. In the 156-816 exam resources, you will cover every field and category in CheckPoint Certification helping to ready you for your successful CheckPoint Certification.

Quality and Value for the 156-816 Exam TestInside Practice Exams for CheckPoint **CheckPoint** Certification 156-816 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

TestInside provide the professional Q&A.

1. We offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the 156-816 Exam.

156-816 simulation test questions, including the examination question and the answer, complete by our senior IT lecturers and the CheckPoint product experts, included the current newest 156-816 examination questions.

3. 100% Guarantee to Pass Your CheckPoint exam and get your CheckPoint Certification.

If you do not pass the CheckPoint Certification 156-816 exam (Check Point Certified Managed Security Expert Plus VSX NGX) on your first attempt using our TestInside testing engine and pdf file, we will give you a FULL REFUND of your purchasing fee.

use TestInside 156-816 Q&A ensure you pass the exam at your first try.

TestInside professional provide CheckPoint 156-816 the newest Q&A, completely covers 156-816 test original topic. With our complete CheckPoint resources, you will minimize your CheckPoint cost and be ready to pass your 156-816 tests on Your First Try, 100% Money Back Guarantee included!

[CheckPoint 156-816](#) Test belongs to one of the CheckPoint certified test, if needs to obtain the CheckPoint certificate, you also need to participate in other related test, the details you may visit the [CheckPoint](#) certified topic, in there, you will see all related CheckPoint certified subject of examination.

TestInside Testing Engine Features

Comprehensive questions and answers about 156-816 exam

156-816 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

156-816 exam questions updated on regular basis

Same type as the certification exams, 156-816 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free 156-816 exam demo before you decide to buy it in Test-Inside.com.

Note: This pdf demo do not include the question's picture.

Exam : Check Point 156-816

Title : Check Point Certified Managed Security Expert Plus VSX NGX

1. A _____ is a virtual security device configured on a VSX Gateway, which operates as a complete routing and security domain, with firewall and VPN capabilities.

- A. Virtual Switch
- B. Context Identification Module
- C. Virtual System Extension
- D. Virtual System
- E. External Virtual Router

Answer: D

2. What is the difference between Single-Context and Multi-Context processes?

- A. Single-Context processes are implemented in standard firewall deployments, while only Multi-Context processes are implemented in VSX Gateway deployments.
- B. Single-Context processes are shared between VSX Gateways in an HA configuration, while Multi-Context processes are shared between VSX Gateways in a Load Sharing environment.
- C. Single-Context processes are ones in which all Virtual Systems share, while Multi-Context processes are unique to each Virtual System.
- D. Single-Context processes are implemented in a single VSX Gateway environment, while Multi-Context processes are only implemented in VSX Gateway High Availability (HA).
- E. Single-Context processes are unique to each Virtual System on a Gateway, while Multi-Context processes are ones in which all Virtual Systems share.

Answer: E

3. How many Management Virtual System instances does each member of a VSX Gateway cluster run?

- A. One for each physical interface on the Gateway
- B. One for each cluster member
- C. Only one
- D. Two, the cluster MVS and the unique Gateway MVS
- E. One for each Virtual System configured on the Gateway

Answer: C

4. When configuring a Provider-1 management solution for your VSX Gateway, what is the fewest number of CMAs that must be licensed, for VSX management functionality?

- A. 50
- B. 25
- C. 5
- D. 10
- E. 1

Answer: D

5. Which of the following MDS types allows you to create and manage a VSX Gateway?

- A. MDS CLM
- B. MDS Manager station

- C. MDS VSX Integrator
- D. MDS MLM
- E. MDS Manager + Container station

Answer: E

6. You are configuring source-based routing in a VSX Gateway deployment with both External and Internal Virtual Routers. Which of the following functions cannot be configured for the Virtual Systems?

- A. Virtual System clustering
- B. Anti-spoofing measures
- C. Network Address Translation
- D. Remote access VPNs
- E. Intranet VPNs

Answer: B

7. When configuring Virtual Systems with overlapping IP addressing, the Virtual Systems must:

- A. Be included in a VPN.
- B. Be on the same network.
- C. Perform Network Address Translation.
- D. Perform in Bridge mode.
- E. Define VLAN Tags.

Answer: C

8. Which of the following items is most commonly configured as the default Gateway for a Management Virtual System?

- A. Interface leading to the management network
- B. Same setting as the default Gateway of the External Virtual Router; typically this is a perimeter router.
- C. External Virtual Router
- D. Internal Virtual Router
- E. Interface leading to the synchronization network

Answer: C

9. During the initial configuration of a VSX Gateway cluster, the VSX Administrator is prompted to specify each cluster member's name, as shown below: Which of the following best describes this name?

- A. IP address of the individual VSX Gateway in the cluster
- B. Any name the VSX Administrator chooses to describe the cluster member
- C. Customer for which this VSX Gateway cluster is configured
- D. MAC address of the individual VSX Gateway in the cluster
- E. Hostname of the individual VSX Gateway in the cluster

Answer: B

10. What are the two levels of VSX Gateway clustering?

- A. INSPECT and database level
- B. Database and VSX Gateway levels
- C. Virtual device and database levels
- D. INSPECT and configuration levels
- E. Virtual device and VSX Gateway levels

Answer: E

11. A Warp Link is a virtual point-to-point connection between a:

- A. Virtual Router and Virtual System.
- B. Virtual Router and Virtual Switch.
- C. Virtual System and the management interface.
- D. Virtual Router and a physical interface.

E. Virtual System and another Virtual System.

Answer: A

12. When deploying a VSX Gateway managed by a SmartCenter Server, which of the following statements is TRUE?

- A. VSX Administrators can configure different domains for each Virtual System.
- B. Multiple Administrators can simultaneously connect to the same database, to manage multiple Customers.
- C. All Customer objects, rules, and users are shared in a single database.
- D. Each Virtual System has its own unique Certificate Authority.
- E. VSX superuser Administrators can configure granular permissions for each Customer Administrator.

Answer: C

13. TRUE or FALSE. A Virtual System in Bridge mode can enforce anti-spoofing definitions.

- A. True, anti-spoofing must be manually defined in bridge mode.
- B. True, as long as the Virtual System has more than two interfaces defined.
- C. True, as long as Network Address Translation is performed.
- D. True, anti-spoofing measures are defined automatically in Bridge mode.
- E. False, anti-spoofing cannot be configured for Virtual Systems in Bridge mode.

Answer: A

14. In a VSX Gateway cluster, which of the following objects are available by default as installation targets for the Management Virtual System?

- A. Individual Management Virtual Systems (MVS) for each cluster member
- B. MVS cluster object
- C. Individual External Virtual Routers for each cluster member
- D. Virtual Switch cluster object
- E. Individual Virtual Switch Members

Answer: B

15. Which of the following statements is true concerning the default Security Policy of the External Virtual Router?

- A. The External Virtual Router automatically performs Hide NAT behind its external interface for all Virtual Systems connected to it.
- B. The default Policy of the External Virtual Router denies all traffic going to or coming from it.
- C. The default policy of the External Virtual Router cannot be changed.
- D. All traffic coming from networks protected by a VSX Gateway is accepted. All other traffic is dropped.
- E. The External Virtual Router always enforces the same Policy as the Management Virtual System.

Answer: B

16. During MDS installation, you must configure at least one VSX Administrator. After creating the Administrator, you are prompted to perform which task?

- A. Grant VSX-specific privileges to the Administrator
- B. Assign the Administrator to manage a specific Virtual System
- C. Add the Administrator to a group
- D. Assign the Administrator to manage a specific interface on the VSX Gateway
- E. Assign the Administrator to manage a specific CMA

Answer: C

17. I319117
