

3M0-600 3Com Certification 3COM Wireless Specialist Final Exam

Practice Exam: 3M0-600 Exams

Exam Number/Code: 3M0-600

Exam Name: Wireless Specialist Final Exam

Questions and Answers: 150 Q&As

([3Com Certification](#))

Exam : [3M0-600](#)

"Wireless Specialist Final Exam", also known as 3M0-600 exam, is a 3COM certification. With the complete collection of questions and answers, TestInside has assembled to take you through 150 Q&As to your 3M0-600 Exam preparation. In the 3M0-600 exam resources, you will cover every field and category in 3COM Certification helping to ready you for your successful 3COM Certification.

Quality and Value for the 3M0-600 Exam TestInside Practice Exams for 3COM **3Com Certification** Certification 3M0-600 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

TestInside provide the professional Q&A.

1. We offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the 3M0-600 Exam.

3M0-600 simulation test questions, including the examination question and the answer, complete by our senior IT lecturers and the 3Com Certification product experts, included the current newest 3M0-600 examination questions.

3. 100% Guarantee to Pass Your 3Com Certification exam and get your 3Com Certification Certification.

If you do not pass the 3COM Certification 3M0-600 exam (Wireless Specialist Final Exam) on your first attempt using our TestInside testing engine and pdf file, we will give you a FULL REFUND of your purchasing fee.

use TestInside 3M0-600 Q&A ensure you pass the exam at your first try.

TestInside professional provide 3Com Certification 3M0-600 the newest Q&A, completely covers 3M0-600 test original topic. With our complete 3Com Certification resources, you will minimize your 3Com Certification cost and be ready to pass your 3M0-600 tests on Your First Try, 100% Money Back Guarantee included!

[3COM 3M0-600](#) Test belongs to one of the 3Com Certification certified test, if needs to obtain the 3Com Certification certificate, you also need to participate in other related test, the details you may visit the [3Com Certification](#) certified topic, in there, you will see all related 3Com Certification certified subject of examination.

TestInside Testing Engine Features

Comprehensive questions and answers about 3M0-600 exam

3M0-600 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

3M0-600 exam questions updated on regular basis

Same type as the certification exams, 3M0-600 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free 3M0-600 exam demo before you decide to buy it in Test-Inside.com.

Note: This pdf demo do not include the question's picture.

Exam : 3COM 3M0-600

Title : 3Com Wireless Specialist Final Exam

1. Which antenna type is typically used indoors to provide large coverage areas within a building?

- A. Dipole antenna
- B. Omnipole antenna
- C. Yagi or semi-directional antenna
- D. Patch panel or parabolic antenna

Answer: B

2. Which three are features of 3Com Dynamic Security Link? (Choose three.)

- A. Per user, per session dynamic key encryption
- B. 40-, 128- and 168-bit shared key encryption support
- C. Internal database supporting up to 1,000 user names and passwords
- D. Local and remote access point (AP) authentication and encryption support
- E. Superior wireless security for networks without a centralized authentication server

Answer: ACE

3. Which three are features supported on the OfficeConnect ADSL Wireless 11g Firewall Router and the 3Com OfficeConnect Wireless 11g Cable/DSL Router? (Choose three.)

- A. VPN termination
- B. Stateful packet inspection
- C. Power over Ethernet (PoE)
- D. Four 10/100 Ethernet LAN ports
- E. 256-bit Wi-Fi Protected Access (WPA) encryption
- F. 40/64-bit and 128-bit Wired Equivalent Privacy (WEP) encryption

Answer: DEF

4. Wireless LAN (WLAN) IEEE 8011a Turbo Mode bonds two channels together for up to 108 Mbps data rates.

- A. True
- B. False

Answer: A

5. Which wireless building-to-building bridge distance-related parameter must be set to ensure each wireless bridge waits the appropriate period for a response from other wireless bridges?

- A. Basic Rate Set
- B. Broadcast Service Set Identifier (SSID)
- C. Acknowledgement Delay Timeout (ACK)
- D. Request to Send/Clear to Send (RTS/CTS)

Answer: C

6. What is the optimal access point (AP) channel allocation configuration on a Wireless LAN (WLAN)?

- A. APs should be configured with overlapping channels
- B. APs should be configured with different non-overlapping channels
- C. It makes no difference if APs use overlapping or non-overlapping channels
- D. Allow APs to automatically perform the hunting process to determine the best channels

Answer: B

7. Which Wireless Infrastructure Device Manager (WIDM) command displays the generic settings of a discovered 3Com Access Point (AP), i.e., device name, type, IP address, MAC address?

- A. Show
- B. Display
- C. Present
- D. Properties

Answer: D

8. What does the IEEE 802.11d standard specify?

- A. Defines Inter Access Point Protocol (IAPP)
- B. Defines MAC-based Quality of Service (QoS) mechanism
- C. Defines encryption using the Advanced Encryption Standard (AES)
- D. Defines the ability to fine tune Wireless LAN configuration at the Physical (PHY) Layer to comply with country-specific rules

Answer: D

9. Which two are reasons a company may choose to use a building-to-building wireless bridge versus a T1/E1 or fiber link? (Choose two.)

- A. Reliability of the connection
- B. Time to deploy and set up the connection
- C. The distances between the two buildings
- D. The initial installation costs and/or recurring monthly charges

Answer: BD

10. You have launched the 3Com Wireless Infrastructure Device Manager (WIDM) software to configure your Wireless LAN Access Point 8750. When you see the access point (AP) on your PC screen, it has an exclamation point located to the left of the AP. What is the significance of the exclamation point?

- A. The AP is still booting up
- B. The AP has had a device failure and is non-operational
- C. The AP is configured as a Managed Access Point (MAP)
- D. The AP does not have an IP address assigned or is in a different subnet from your PC

Answer: D

11. To configure encryption on an access point (AP) that is part of a Wireless Distribution System (WDS), you must configure each AP separately, using a wired-Ethernet connected computer.

- A. True
- B. False

Answer: A

12. Which statement is true for Wireless LAN (WLAN) data and throughput rates?

- A. Data rates drop as the distance to the access point (AP) increases
- B. Data rates drop as the distance to the access point (AP) decreases
- C. Actual data throughput on a WLAN is about 25% of the defined throughput rate
- D. Data rates on an IEEE 802.11a/g WLAN are not affected by distance from the access point (AP)

Answer: A

13. You have taken a new job as the network administrator. You find a 3Com Wireless LAN Access Point 8750 on a shelf in the network supply closet. What should you do when you are unable to connect a Wireless LAN Access Point 8750 because your predecessor has configured the access point (AP) with an unknown username and password?

- A. Attach your PC directly to the RJ-45 port on the AP and telnet into the AP

- B. Reset the AP configuration to factory default by pressing the reset button for at least 15 seconds
- C. Reset the AP to its default factory settings by opening the back of the AP and removing the battery for at least 30 seconds
- D. Use Windows Registry Editor to create and upload the following text to disable the AP security:
"HKEY_USERS.DEFAULT\Software\3Com Corporation\EAPOL\UserEapInfo"

Answer: B

14. Which describes the 3Com Receiver Signal Strength Indicator (RSSI) access point (AP) implementation?

- A. AP displays its own signal strength as a value from 0 to 255
- B. AP displays neighbor AP's signal strength as a percentage value
- C. AP displays its own signal strength and quality as a percentage value
- D. AP displays neighbor AP's signal strength and quality as a value from 0 to 255

Answer: B

15. Click the Exhibit button at the bottom of the screen.

Choose the two features supported by the 3Com Wireless LAN Managed Access Point (MAP) 2750. (Choose two.)

- A. Fit access point
- B. IEEE 802.1X Network Login and IPSec
- C. Dual-mode radio allows operation for both IEEE 802.11b/g and IEEE 802.11a
- D. Dual-mode radio allows operation for either IEEE 802.11b/g or IEEE 802.11a

Answer: AD

16. Many access points (APs) are set up with a default configuration, known as "open system" or "open system authentication," so any station can associate and connect.

- A. True
- B. False

Answer: A

17. Which two are features of a Wireless LAN (WLAN) Infrastructure Basic Service Set? (Choose two.)

- A. Also known as an Ad Hoc or Peer-to-Peer WLAN
- B. Members communicate directly with each other within the service area
- C. Created when two or more Basic Service Sets are connected together
- D. Only stations exist in the service area and no access point (AP) is used
- E. Management and control of the service area is performed by the access point (AP)

Answer: BE

18. Which procedure allows the network administrator to set up a Wireless LAN Access Point (AP) 8750 to support RADIUS Authentication?

- A. Use the 3Com Web Configuration Management System to login to the AP, click on the "RADIUS" hyperlink and configure the RADIUS settings
- B. Use the Wireless Infrastructure Device Manager (WIDM) to choose the AP from the list, click on the "RADIUS" hyperlink and configure the RADIUS settings
- C. Use a web browser to navigate to the RADIUS Authentication server, click on "Configure new device," choose the AP from the list and configure the RADIUS settings
- D. Use the 3Com Web Configuration Management System to login to the 3Com Wireless LAN Controller/Switch, choose the AP from the list and configure the RADIUS settings

Answer: A

19. What was a limitation of first-generation Wireless LAN (WLAN) products?

- A. Were designed to be managed individually
- B. Did not support roaming for mobile computers
- C. Did not provide authentication or encryption services
- D. Were not designed to support large number of users

Answer: A

20. The 3Com 11a/b/g Wireless LAN Workgroup Bridge enables a laptop, PC or printer without built-in wireless capability to connect to a wireless LAN.

A. True

B. False

Answer: A
