Exam : [83-640](#)

"TS: Windows Server 2008 Active Directory, Configuring", also known as 83-640 exam, is a Microsoft certification. With the complete collection of questions and answers, TestInside has assembled to take you through 52 Q&As to your 83-640 Exam preparation. In the 83-640 exam resources, you will cover every field and category in Microsoft Certification helping to ready you for your successful Microsoft Certification.

Quality and Value for the 83-640 Exam TestInside Practice Exams for Microsoft **TS** Certification 83-640 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

#### ***TestInside provide the professional Q&A.***

1. We offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the 83-640 Exam.

83-640 simulation test questions, including the examination question and the answer, complete by our senior IT lecturers and the TS product experts, included the current newest 83-640 examination questions.

3. 100% Guarantee to Pass Your TS exam and get your TS Certification.

If you do not pass the Microsoft Certification 83-640 exam (TS: Windows Server 2008 Active Directory, Configuring) on your first attempt using our TestInside testing engine and pdf file, we will give you a FULL REFUND of your purchasing fee.

#### ***use TestInside 83-640 Q&A ensure you pass the exam at your first try.***

TestInside professional provide TS 83-640 the newest Q&A, completely covers 83-640 test original topic. With our complete TS resources, you will minimize your TS cost and be ready to pass your 83-640 tests on Your First Try, 100% Money Back Guarantee included!

[Microsoft 83-640](#) Test belongs to one of the TS certified test, if needs to obtain the TS certificate, you also need to participate in other related test, the details you may visit the [TS](#) certified topic, in there, you will see all related TS certified subject of examination.

#### ***TestInside Testing Engine Features***

Comprehensive questions and answers about 83-640 exam

83-640 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

83-640 exam questions updated on regular basis

Same type as the certification exams, 83-640 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free 83-640 exam demo before you decide to buy it in Test-Inside.com.

Exam : Microsoft 83-640

Title : TS: Windows Server 2008 Active Directory, Configuring

1. Your network consists of a single Active Directory domain. All domain controllers run Windows Server 2008 and are configured as DNS servers. A domain controller named DC1 has a standard primary zone for contoso.com. A domain controller named DC2 has a standard secondary zone for contoso.com.

You need to ensure that the replication of the contoso.com zone is encrypted. You must not lose any zone data. What should you do?

- A. On both servers, modify the interface that the DNS server listens on.
- B. Convert the primary zone into an Active Directory-integrated zone. Delete the secondary zone.
- C. Convert the primary zone into an Active Directory-integrated stub zone. Delete the secondary zone.
- D. Configure the zone transfer settings of the standard primary zone. Modify the Master Servers lists on the secondary zone.

Answer: B

2. You have a domain controller named DC1 that runs Windows Server 2008. DC1 is configured as a DNS Server for contoso.com.

You install the DNS Server role on a member server named Server1 and then you create a standard secondary zone for contoso.com. You configure DC1 as the master server for the zone.

You need to ensure that Server1 receives zone updates from DC1.

What should you do?

- A. On Server1, add a conditional forwarder.
- B. On DC1, modify the permissions of contoso.com zone.
- C. On DC1, modify the zone transfer settings for the contoso.com zone.
- D. Add the Server1 computer account to the DNSUpdateProxy group.

Answer: C

3. Your company has a single Active Directory domain named intranet.adatum.com. The domain controllers run Windows Server 2008 and the DNS server role.

All computers, including non-domain members, dynamically register their DNS records.

You need to configure the intranet.adatum.com zone to allow only domain members to dynamically register DNS records.

What should you do?

- A. Set dynamic updates to Secure Only.
- B. Enable zone transfers to Name Servers.
- C. Remove the Authenticated Users group.
- D. Deny the Everyone group the Create All Child Objects permission.

Answer: A

4. Your network consists of an Active Directory forest named contoso.com. All servers run Windows Server 2008. All domain controllers are configured as DNS servers. The contoso.com DNS zone is stored in the ForestDnsZones Active Directory application partition.

You have a member server that contains a standard primary DNS zone for dev.contoso.com.

You need to ensure that all domain controllers can resolve names for dev.contoso.com.

What should you do?

- A. Create a NS record in the contoso.com zone.
- B. Create a delegation in the contoso.com zone.
- C. Create a standard secondary zone on a Global Catalog server.
- D. Modify the properties of the SOA record in the contoso.com zone.

Answer: B

5. Your network consists of an Active Directory forest that contains one domain named contoso.com. All domain controllers run Windows Server 2008 and are configured as DNS servers. You have two Active Directory-integrated zones: contoso.com and nwtraders.com.

You need to ensure a user is able to modify records in the contoso.com zone. You must prevent the user from modifying the SOA record in the nwtraders.com zone.

What should you do?

- A. From the DNS Manager console, modify the permissions of the contoso.com zone.
- B. From the DNS Manager console, modify the permissions of the nwtraders.com zone.
- C. From the Active Directory Users and Computers console, run the Delegation of Control Wizard.
- D. From the Active Directory Users and Computers console, modify the permissions of the Domain Controllers organizational unit (OU).

Answer: A

6. Your company has a main office and a branch office. The company has a single-domain Active Directory forest. The main office has two domain controllers named DC1 and DC2 that run Windows Server 2008. The branch office has a Windows Server 2008 read-only domain controller (RODC) named DC3.

All domain controllers hold the DNS Server role and are configured as Active Directory-integrated zones. The DNS zones only allow secure updates.

You need to enable dynamic DNS updates on DC3.

What should you do?

- A. Run the Ntdsutil.exe > DS Behavior commands on DC3.
- B. Run the Dnscmd.exe /ZoneResetType command on DC3.
- C. Reinstall Active Directory Domain Services on DC3 as a writable domain controller.
- D. Create a custom application directory partition on DC1. Configure the partition to store Active Directory-integrated zones.

Answer: C

7. Your company, Contoso, Ltd., has a main o

- B. Create a new delegation in the DomainDnsZones application directory partition.
- C. From the command prompt, run dnscmd and specify the /enlistdirectorypartition parameter.
- D. From the command prompt, run dnscmd and specify the /createdirectorypartition parameter.

Answer: D

9. Your company has a DNS server that has 10 Active Directory-integrated zones. You need to provide copies of the zone files of the DNS server to the security department. What should you do?

- A. Run the dnscmd /ZoneInfo command.
- B. Run the ipconfig /registerdns command.
- C. Run the dnscmd /ZoneExport command.
- D. Run the ntdsutil > Partition Management > List commands.

Answer: C

10. Your network consists of an Active Directory forest that contains one domain. All domain controllers run Windows Server 2008 and are configured as DNS servers. You have an Active Directory-integrated zone. You have two Active Directory sites. Each site contains five domain controllers. You add a new NS record to the zone.

You need to ensure that all domain controllers immediately receive the new NS record. What should you do?

- A. From the DNS Manager console, reload the zone.
- B. From the Services snap-in, restart the DNS Server service.
- C. From the command prompt, run repadmin /syncall.
- D. From the DNS Manager console, increase the version number of the SOA record.

Answer: C
